Topics

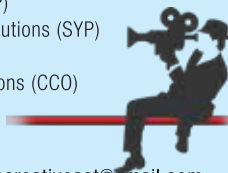

• Swachh Bharat – "Hamari Zimmedari" • Jago Grahak Jago • Mera Haq My Right • Right to Voice • Right to Know • Right to Act • Fair Business Practices

CFBP Short Film Competition

Film Duration: Up to 180 seconds

Entries invited under FOUR categories based on type of entrants

- Filmmakers and other Professionals (FOP)
- Students, other Young Persons and Institutions (SYP) (age limit of entrant: up to 30 years)
- Companies, Corporations and Organisations (CCO)
- NGOs (NGO)

Cash Prize – 51000/-

Send your entries to CFBP online on cfbpcreativeact@gmail.com

CFBP Script Writing Contest

Script Duration: Up to 180 seconds

Entries invited under TWO categories based on age of entrants

- Below 20 years
- Above 20 years

Script writing

Cash Prize – 10000/-

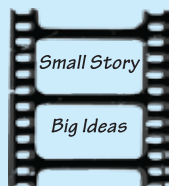

Send your entries to CFBP online on cfbpwritingskills@gmail.com

CFBP Short Story Writing Contest

Length: 400 words (An apt title must be provided for the story)

Entries invited under TWO categories based on age of entrants

- Below 20 years
- Above 20 years

Cash Prize – 10000/-

Send your entries to CFBP online on cfbpwritingskills@gmail.com

CFBP Street Play Competition

Duration: 5 - 8 minutes

Entries invited under TWO categories based on age of entrants

- Entries invited
- Evaluation on Thursday 28th September 2017

Cash Prize – 10000/-

Send your entries to CFBP online on cfbpcreativeact@gmail.com

CFBP Best Slogan Competition

Entries invited under TWO categories based on age of entrants

- Below 20 years
- Above 20 years

Cash Prize – 5000/-

Send your entries to CFBP online on cfbpwritingskills@gmail.com

CFBP Poster Competition

Entries invited under TWO categories based on age of entrants

- Below 20 years
- Above 20 years

Cash Prize – 10000/-

Send your entries to CFBP online on cfbpartist@gmail.com

Last Day of Entry – 5th September 2017

Cash Prizes, Trophy and a certificate of appreciation will be given to the 1st Winner on the day of the Award Function in November

- Winners will receive their awards at the hands of our distinguished Chief Guest during the Award function.
- Winners of the Best Street Play shall enact the play on the day of function.
- Best Short Films shall be screened on the day of the function. • The Best Poster shall be displayed at the Awards venue.

SILVER SPONSORS

FROM THE DESK OF PRESIDENT

Ms. Kalpana Munshi

We sow the seeds of consumer service as we carry out our work, although we never know when the seeds will germinate. In the meantime nonetheless I am sure CFBP will establish as a national leader in consumer service and spreading the mission of Fair Business Practices only if we consciously grasp that the best time to act is now. Together we can bring change all over now, and if we consolidate our efforts we can make a real difference. Please understand - "Tomorrow is always too late" said and director general of UNESCO Future generations will inherit a better world if CFBP members understand that the work that needs going will not just happen. We must make things Happen! Let's work Together and Build the Future with Action and Vision. Our scriptures proclaim again and again that doing good to

someone who needs this good is in itself recognition of your kindness. We don't have to look for recognition from others. Yes, recognition may come, awards may accrue, awards may be presented, but the real award is the smile on the face of the recipient of your service or the gratefulness expressed by the needy or merely an expression on the face which speaks more than all the words of thankfulness put together.

Do CFBP members consider service as a burden which needs to be paid back in terms of rewards? Don't you consider it as your duty? The answer will clearly demonstrate the mind frame of the CFBP member. Let us all follow the mission of CFBP and share the glory, the satisfaction and the happiness that comes out of our services rendered with no strings attached.

Mr. Mukesh Ambani, President Ms. Kalpana Munshi, Ms. Rajashree Birla, Mr. Keshub Mahindra & Mr. Deepak Parekh

SAVE ENVIRONMENT - REDUCING PLASTIC POLLUTION

Distinguished Speaker:

Ms. Juhi Chawla Mehta

Actor, Producer, Entrepreneur, Philanthropist

Plastic, we using it every day, every moment, what do we know about it?, so, I am going to take you through some very basic facts, then we go through the alarming damage that it can do to our health and it is doing to our environment and then lastly we explore what can we do about it. So what we see but we are turning a blind eye to this these days. This is our city Versova Beach, Hajiali, the Mithi River, which is less of a river and more of a dump, housing society this is like almost every housing society, and just three days ago, we have a picture that was taken on Marine Drive this is the way sea throwing back the dump that we have thrown into it. The Supreme Court in May 2014 said unless we examine a total ban on plastic bags, the next generation will be threatened with something more serious than the atombomb. Let's go over some facts about plastics. All of us know this somewhere that plastic does not decomposed. So what does this mean? that it just means that the earth cannot digest it. What this says that every piece of plastic that was ever made on this earth since 65 years is still there. That means, even the toothbrush you used as a child is still floating on the planet somewhere and where is it? It could be in the lakes, in the rivers, the ponds, the streams or it is on the roadside somewhere or it could be in the landfill outside the city or it could be in the stomach of some animal or around their necks strangling them and today we produce 300 million tones of plastic every year. Second fact, that plastic itself is inner but to make any product from it you have to add toxic, chemicals, these are dangerous chemicals like if you are making simple rubber bands you need a elastisizers to be put into it, if you are making the insides of Aeroplane you need to make them flame retardant, so flame retardants those are heavy chemicals, if you are making toys, just toys, you needs colours to make them attractive, now this is not organic colours, these are chemicals colours, if you are using them to make bottles for your drinking water, you are making them transparent you need to add chemicals to make it

look that way. The third fact is when these plastic items come in contact or exposed to heat, to air to water, these chemicals leach out, ok, so let's just see, some of the very commonly used plastics, we all heard of PVC, Polyvinyl chloride so where it is used?, it used in plumbing pipes, it used in all the children toys, it's used for their playmats, vinyl flooring, you heard of vinyl flooring, its also used in clean wraps for foods, how many of us when we are putting our food in the freeze or whatever, wrapping a sandwich are using these things wrap, it is said that the manufacture and incineration of PVC creates and releases dioxins which cause a wide range of health effects including cancer, dots defects, diabetes, learning and developmental delays, endometrioses, immune system abnormalities, another plastic that we use just like that Polystyrene, yes Polystyreneit's known as Styrofoam, commonly known as Styrofoam, and we use it for cups, plates, for restaurant take aways, thermocol packaging, it is said about Polystyrene that Polystyrene can leach styrene a suspected carcinogen is specially in the presence of heat which makes coffee or tea in any of these cups an unwise choice. How many time we have seen and I have done it myself, I didn't know about it, birthday parties, and we give hot food to our children at birthday parties, at wedding parties, in these thermocol plates and in these thermocol cups we gives them tea and coffee, another one PET, PET bottles they use for water, for soft drinks, for sports drinks, ketchups, sauce bottles, how many of you drink water from plastic bottles? Everybody, and we got it in front of us as well, and how many of you give it to your children?, so that the film is more visible, it is little short film is for all of you, because somewhere I think my saying it would not make impact, if certain authority says it you will believe them, so this was the report came on the television and I was so happy, you say you are just an actress what do you know?, but when somebody like that speaks then I am sure you will take notice and take it home with you, so the whole programme was about of half an

Ms. Swarn Kohli, Mr. Kiran Dighavkar, Ms. Dolly Thakore, Ms. Kalpana Munshi, Ms. Juhi Chawla Mehta, Ms. Shelly Gupta, Ms. Rajyalakshmi Rao, Standing, Mr. Madhukar Bhide, Mr. Shrikant Soman, Mr. Niranjhan Jhunjhunwala, Mr. Padmakar Nandekar, Mr. Kiran Mehta, Mr. Rushabh Vasa, Mr. Anand Patwardhan, Mr. Rajen Desai, Mr. Sushil More.

hour is on plastics and all the different aspects of it, people don't have the patience to sit through half an hour programme so we clipped it and we made short clips which are important and can be seen and can be use in a presentation. The third fact was plastic when they come in contacts with heat, when they exposed to sun these chemical will leach out which have been used to make the plastics, so think about it, we are in a tropical country, our average temperature in summer is 40, 44 in Chennai, 45 in Delhi, in Hyderabad 45-46, now when our water, soft drinks are packaged in the factory assuming they put the best product in and they have taken all the care they can from the factory when this water is being transported, I don't know if these bottles are being transported in AC vans, they are being transported on top of trucks, sometime open trucks, tempos and these travel, they have to travel from the factory to your outlet, to the retailer, and so many times your retailer is not natures basket an AC lovely room, they are "Kirane ki dukan" they are "dhabewali dukan, wahapar vo log ye botale bahar rakhate hai taki grahak unko dekh sake or you know they come for water they see that there is bisleri available hai, Himalayin water available hai they come to buy it so what is it if all being exposed to for chauraha, hotel, restaurant, so again, this is just a thought I would like to leave you with and if we have it we can watch the film (video film shown to audience)all right this was Bhabha Atomic Research Centre saying this, not Juhi Chawla and just go over this little facts just once more briefly so that you can keep them in mind, and then view another lovely film that we found, one is Plastic does not decomposed next 1000 years it will not decomposed it just keep breaking into smaller and smaller bits, it become so tiny, that next it will be mixed up with our food and our drink and we would not even realised it called micro plastic it become so tiny it attached itself to the plankton in the seas it that tiny, in the making of every plastics item toxic chemicals are added and when these items come in contact with heat, with the sun, with the air, with the water, these chemical do leach out, so with that can we show them our next film, (video clip shown) so yes we need to make the change, and it is this time to make the change, and the good news is that plastic is a convenience, it is not a necessity, with a little efforts and a little mindfulness, we can save our health, our environment from a lot of damage, I want to give example of what I did at home, when I got to known of all of this,...Oops....you have to start from your own home, nahi to bahar jakar kaise bolenge kisiko, so I went to the kitchen, I said take out all the plastic bottles, all the plastic containers and we just went back to glass, to steel, my children, I look at their tiffen boxes and oops, this is plastics sometime I am packing hot food in it, what am I doing to my children, so I said "sorry kids, steel kebox, steel ke bartan aayenge"so off-course

**Mr. Shrikant Soman, Mr. Sushil More,
Mr. Anand Patwardhan & Mr. Niranjhan Jhunjhunwala**

**Mr. Padmakar Nandekar, Ms. Kalpana Munshi,
Ms. Juhi Chawla Mehta, Ms. Shelly Gupta**

they said no way, we are not taking steel boxes to school, I said you are, and they did, again water bottles, you get lovely coloured Milton water bottles, I changed my kids water bottles to Milton water bottles and they come in lovely colours, it's a great thing to carry, plastic bags, Offices, big offices have canteens, have kitchens well we can look into those kitchens and see whether you know plastic forks, plastic plates, Styrofoam any form of that being used replace it with steel, with glass, with ceramic, in the office if bottled water is being use, put up a water station, and let people carry their reusable water bottles, or you can give them nice big company, why not give them monogrammed bottles, steel bottles with the company logo, if you have permanent employees, monogram on their name on it, you know, you can have mugs, steel mugs coloured nicely again with your company logo, monogrammed. They are in the process of making this change, and this idea I wanted to share all of you. Corporate gifting and so sweetly you gave me the flowers and you said sorry, this is one thing that we overlooked, flowers with this extra wrap, that envelope with that extra plastic wrap, packaging, we package gift and its in plastic we can think of other ways to do it, it is just a little awareness, a little efforts and it can be done, because I want to remind you, you say it just a small thing, it's a one paper, but you know that one paper is staying on this earth for next 1000 years it is going to the landfill, some little animal is going to chew on it, die because of plastic in it's stomach, it's body will decomposed, but the plastic is still there and it will waits for its next victim, and so it will go on killing a number of animals or the environment until I don't know when, if you have TV screens in your offices, because you are all from business houses I imagine all, if you have TV screens please we have lots of short films, which are very interesting and we would like you to play them, I mean please contact one of us, Munshiji here, myself, Nilima, we are happy to share these films, you just run them, koi aate jaate dekhata hai, the awareness is spread, you know today I could have sat back and said you know what am I doing with my time and I am coming and talking about plastic to people, but I said NO, this matter is very huge, it collusive, if today I can inspire a one person, if today I can awaken one person, and one person makes a change, I think my day is done and so I think you will make the change and do it not for me do it for the people you love the most, do it for your children, Thank you.

SEGREGATION OF GARBAGE

Distinguished Speaker:

Mr. Kiran S. Dighavkar

Asst. Commissioner MCGM, A Ward

I have, because who else knows better than BMC ki effects of plastics ki jo hum log suffer karte hai water nallas jisme wo plastic fasta hai, jiski wajah se flooding hona, ya let Marine Drive cleaning hoga, let me tell you there are 30000 labours per day of MCGM are cleaning Mumbai, 30000 per day, can you imagine they are entering into the gutter, woh sab gutter me se sewage nikal rahe hai, usme woh sab plastic atka huva nikal rahe hai, aur aaj usko dekh ke hume kharab lag raha hai ki they are entering into it aise, we believe ki atleast nahi hamare liye to atleast wo labour logo ke liye jo 30000 aaj kaam kar rahe hai unke liye to hume kuch sochana hoga aaj already hum is beaches par dekh rahe hai, jitana plastic dekh rahe hai, marine drive par dekh rahe hai, to kahin na kahi nature hume bata raha hai ki abhi ye leke jao bahot ho gaya maine tumhara bahot sambhal liya abhi itne salon se abhi mere se sambhala nahi jaa raha hai karke, marine drive ka high tide ke time pe jo aane wale picture hai, ya fir aaj Juhu beach pe kafi ho raha hai, Afroz aur vo kachara saaf kar rahe hai, humne aise kar diya, ye kar diya next day morning chale jao, thik hai unke liye it's a new thing unhone kiya karke citizen ke liye for BMC it's roj ka hai, aaj morning me chale jaon waha, same beaches same jaise ki vaise pade huve hai, beaches like Badwar Park pura plastics se bhara huva hai, so this is nature is now telling ki bahot ho gaya, abhi ye aap leke jao karke aise, so infact we should be wise enough to listen to this call why nature is answering this way, why these things are started happening karke, it was really delightful so before I start I thought ki Mahoul thoda halka kar diya maine event se, aur usko appreciate kar gaya, so let's start with waste segregation, I guess ki presentation dene se accha, because I am too young to give presentation to all these elders, mujhe aise laga ki main thodi information du instead of presentation ki what exactly waste segregation is and aaj kal ki jo BMC ne release kiya tha ki Jo bulk generators hai, ki we did not pick up your garbage, 2nd October, 2017 se jo bulk generators hai na, definition of bulk generator is the institution let it be housing society, let it be restaurant let it be anything, that those generating 100 kg waste per day is a bulk generator in Mumbai, there are around 20000 bulk generator in Mumbai, so we told them that we will not pick up your garbage unless it is segregated in that case we are saying ki wet waste jo hoga, we waste aapko aapki premises me composting karna hoga ki we will only collect dry waste, dry waste ke alawa hum aapka koi bhi garbage collect nahi karne wale hai, no doubt there is you and cry, aise thodi hota hai?, ye thodi hota hai? But we are still stick up to our stand, thodasa trends of urbanisation agar aap dekho, to jitane urban

Ms. Dolly Thakore presents Mr. Kiran Dighavkar with a special souvenir

cities hai din badin badhate ja rahe hai, population in urban cities badhate ja rahi hai, total population aaj 41% hai India me, jo urabn isme thi, can you believe, waste generation per capita is increasing by 1.3% every year, waste generation 1.3% increase ho raha hai, baad me urban population increase ho raha hai 3%, waste generation 1.3% increase ho raha hai, or waste generation yearly increasing is around 5% annually usme agar waste ko aap broadly divide kare to 30-55% is biodegradable or compostable jis se composting ho sakati hai, wet waste bolte hai, hotels se jo generate hota hai use, baki 40% aisa hai ki jisko hum dumping ground per bhejate hai, usme recycalable material bhi hai 5-10% abhi isko kum kaise kiya jay?, agar aaj Mumbai ki baat kare to, Mumbai mai waste generation aaj 8500 metric ton of waste generation hai Mumbai me, aaj isko dumping ground pe let me share with you one experience, before I join as Assistant Commissioner of "A" Ward, I was Assistant Commissioner of Govandi, that was my first posting at the age of 32, that famous Deonar fire was during that time only, in fact when I started talking I asked my Driver to get some Vicks ki goli, because I cannot talk more just because I was, during that fire thing I was there, I was the one who shut down all the schools, 76 Schools the us area me, because of waha pura dhuwa ho gaya tha, bacche kah rahe the ki sir aankh me dukh raha hai karke, Headmasters used to call me, to maine bola ki sir hume inko chutti deni padegi, all chembur ki areas ke school ko chutti di gayi thi, us complaining ki wajah se, during that drowsing and all I was also there,

Mr. Jayesh Khemka & Mr. Kiran Dighavkar

Mr. Kiran Mehta receiving token of gift from Ms. Dolly Thakore

so that was also a alarming call ki kahi to ye rukana chahiye aise, isme corporation kitani jimmedari lega, koi space dene ko taiyar nahi, ab open spaces bilkul nahi hai, logo ko play ground or garden ke liye space nahi hai, and we expect ki koi waste segregation ke liye space dega aise, the only way to reduce the waste is, Deonar is waste segregation, aaj aap wet waste segregate karo, composting aapke premises me karlo, dry waste de do, dry waste aapka kabadi wala, jo hangarwala hai vo dry waste leke jayega, minimal amount of waste we will send it to the dumping ground, that is the only plan, only option left with MCGM mujhe aisa lagata hai, in fact, I am not going into deep, because presentation bilkul boring ho jayega, better way main aapko facts batata hu jo corporation initiatives le rahi hai, kya kya kar rahi hai usme, agar hum soch rahe the ki 20000 bulk generator Mumbai me hai almost 3000 to 4000 metric ton garbage jo generate ho raha hai vo sirf bulk generator se generate ho raha hai, agar inko target kiya jay aur unko composting compulsory kar de ke aaj composting karna hi hai aapke premises me hum sirf dry waste lenge, agar hum aise karte hai to almost 50% to waise he kum ho jayega Deonar me jane se, abhi kaise karna hai, abhi kafi log confuse hai ki are yaar kuch bata to nahi rahe hai, isne circulars to nikal diye hai bole we will not pick up the garbage, now we started each ward level par ho gaya ya fir Mumbai level par we are starting exhibitions, jaha pe we are asking all companies we are related to jo waste energy me hai, waste to composting me hai, ye sab field me jo companies hai hum un sabko bula rahe hai and we are also calling housing societies to take part in that exhibitions aur ek swatchata pledge lenge ki waha pe us housing society ka secretary bolega ki yes main is pachas technology me se ye technology I am going for it aur main is ko kar raha hu karke, so may be in first week of September, we will have a grand exhibition in NSCI in Worli, waha pe we are planning in call all housing societies and we will ask them to usko composting compulsory karo, coming back to plastic, other than, ye ho gaya waste segregation, abhi dry waste ka hum kya karenge, dry waste collection hum kar rahe hai, aaj hum ne dekha hoga ki ragpickers aap har jagah dekh rahe ho, societies me niche khade hai, vo aapka kachara leke jar aha hai, vahi pe segregate kar rahi hai raste pe baithe hai, there are twelve open plots, jo corporation ne abhi identify kiye hai waha pe hum dry waste procession centres shuru kar rahe hai, definitely wo dry waste procession centres hi in fact among you also somebody coming forward ki uska design de ki usko kaise koi Architect hoga ki usko ideally kaise design kiya jay jaise ek place hogi jo sirf plastic process karti jayegi, jo companies hai jo plastic procession me hai wo, we will collect all dry waste of all, jo plastic hai usko wahi pe process kiya jayega, same thing baki kabadiwale ko denge, ki wo usko kharid ke leke jayega, dekhega ki reuse ho sakta hai bottle etc. wo wahase leke ja sakta hai aise, so there are twelve place right now we are identified that usko waha pe karna hai karke, kaise contract deke usko karna hai, abhi ye ho gaya ki bulk generators, bulk generators ke pass jaise jaise ye awareness badhate jayega then we will come to common jo jo individual households hai jo less than 100kg hai, unko target karna shuru ho jayega, lekin mujhe aise lagata hai ki ye moment ki jab tak public isme sath me nahi hai ki jab tak citizens usme sath me nahi hai, tab tak ye movement hona possible hi nahi hai, because I know, Kunte and everybody knowing last 20-30 years she is doing this segregation, ki she is bichari akeli chilla rahi hai ki aise kardo waise kardo everybody made chai pite hai, coffee pite hai, ye hona chahiye bahut acchi baat hai, ye hai, wo hai aise, but ultimately 2-4 log karte hai, segregation karte hai, waste composting karte hai, fir wo baki mahol dekhte hai aur fir demotivate ho jate hai, unko lagta hai ki kuch fayda hota nahi hai yaar, itna 10000 metric ton me se hum kuch 5-10 kilo ka hi to karte rahte hai aur kuch fayda nahi hota hai aise, to ye jo energy level hai ye hume citizens me hi badhani padegi, abhi citizens me kaise badhegi ye energy level to CSR initiatives jo badi badi companies hai, jo wants to work in social field, social work me unko kaam karna hai, ye karna hai aise they should come forward, its not about money, its not about ki corporation ke paas money nahi hai, 60000 crores ke to hamare deposits pade hai bank me corporation ke, corporation ka aur paise ka koi ye nahi hai, corporation ka problem ye hai ki public participation public participation tabhi hoga jab koi organisation samne aayegi aur wo koi project shuru karegi jab tak aise organisation

samne aake kuch project shuru karte nahi, tab tak public usme sath nahi degi so better way ki why not we all come together aur isme badhawa de de aise, so let's see ki we are very hopeful ki isko log kaise lete hai, these housing societies ka during ganapati ye exhibition liya jayega, how many societies take interest, how many people take that swatchata pledge aur kitne log usme interest lenge, sachmuch me kuch machines kharidte hai, sach me composting karna shuru karte hai, in fact we have some plans further ki usse jo manure banega, sab log kah rahe hai ki itna sara composting karke jo manure banega uska karna kya hai aise in fact we are planning ki hamare itne sare gardens hai abhi central dividers me aap dekh rahe ho ki sab jagah pe greenery lagi huvi hai ki, in fact bahar bhi Veer Nariman Road par bhi kafi greenery hai, so we are planning ki ye aap se liya jay aur usko as a manure hum ye sab gardens me use kare, so it should become self contended cycle that people are generating manure we are collecting and let's imagine the day when corporation instead of collecting waste, manure collect karne ke liye ja rahi hai, aur hum aapse manure le rahe hai aur that manure using karke, we are really waiting for the day, so I hope most of them from the A ward, citizens of A ward, my ward, where I am now Assistant Commissioner, so why not to start with A ward. A ward let's set an example for entire Mumbai that our A ward set first example I already identified 227 bulk generator in A Ward we already issued them notices ki aap karna shuru kardo aise kafi logo ne notice ko seriously liya hai, I hope jitney bhi technologies hai uske exhibition ke baad kafi logon ko clear ho jayega ki usme se kya kya technologies humko lene chahiye, kaise karna chahiye aise, agar aap bahar bhi carefully dekhoge to abhi sab jagah pe aapko dry waste aur wet waste ke liye alag se steel bins lage huve hai everybody says ki are yaar hum alag to karte hai lekin corporation ek saath leke jati hai, are ek hi bin laga huva hai usme hi dalna hai to alag karke fayda kya hai, but if you carefully observed dry vehicle separate humare tenders hai, dry wet ke liye separate vehicle aa rahi hai, wet waste ke liye separate vehicle aa rahi hai, its not like ki, its not there, it is your duty to contact that Assistant Commissioner ki hamare idhar vo dry waste ki vehicle nahi aa rahi hai, to please uski services yaha par start kar do aise kar ke, so definitely that will started. Abhi mujhe lagata hai ki dry waste kya hota hai, wet waste kya hota hai itna basic to mujhe nahi lagta ki is stage pe kisiko batane ki bhi jaroorat hai, aise kuch hai nahi but we are simultaneously targeting all marriage halls, vegetable markets, hamare khud ke market se start kar rahe hai ki usko kaise hona chahiye karke, these are the examples ki dry waste vehicles kaise hoti hai, ya wet waste vehicle kaise hoti hai, so I really thank CFBP ki unhone mujhe itni badi opportunity di ki is me I could convey my message to everybody, I hope ki this is much needed aur sab log usko follow kare and please come to that exhibition, you will definitely come to know from the newspapers, advertisements in magazines aap bhi usme part lijiye, thank you once again to everybody, Kalpanaji, who invited me and Juhiji for such wonderful memories which I am taking with me back again, Thank you.

Mr. Rushabh Vasa receiving token of gift from Ms. Dolly Thakore

TOGETHERNESS IS STRENGTH

Honorary Doctorate (D.litt) for Mrs. Gool Ghadiali Chairperson - Education Committee

Mrs. Gool Ghadiali, Principal of Gopal Sharma group of schools, has been conferred an honorary Doctorate (D.litt) for her outstanding contribution to the field of education. The degree was bestowed on her by the University of South America.

An educationist par excellence with over forty years of experience, Mrs. Ghadiali had already served long tenures as Principal Of New Era School And Maneckji Cooper school Mumbai before she took over the reins of Gopal Sharma Memorial School. With the unflinching support of the trustees, she founded a new ICSE section namely Gopal Sharma International School. She is the founder Principal of GSIS. She is known for pursuing excellence wherever she goes - and the two schools GSMS and GSIS are proof of that special quality.

An active Rotarian, Mrs Ghadiali is held in high esteem in the Rotary circle where she has held several posts - that of District Secretary and Asst District Governor to name a few. She is also an Executive Member of the Council for Fair Business Practices. She is a great public speaker and facilitator and is much sought after for her training sessions in India and abroad. The Doctorate degree is yet another feather in now to be called Dr. [Mrs] Gool Ghadiali's cap.

You are cordially invited for a Seminar on

a natural glow.*

We lit up the nation's path to progress

By lighting up street lights across India, we empower women to pursue their dreams.

By lighting up monuments and sports arenas to showcase India's glory.

By electrifying villages, we help generate employment opportunities for the locals.

By innovating solutions, we ensure electrification without causing harm to wildlife.

Ever since we began our journey, it was one dream that kept us going. A dream to bring the nation's dreams to life. And we did. We touched a billion lives with over 1,400 products. We put up over 7 lakh street lights and over 1,700 km of transmission lines. We lit up more than 25,000 villages, and illuminated hundreds of stadia and monuments across the nation. And to experience this glorious journey visit: www.magicoflight.bajajelectricals.com
